

# Identifying Wildfire Risk Using Geospatial Technology

Transforming  
Landscape Data into  
Practical Wildfire  
Risk Insights

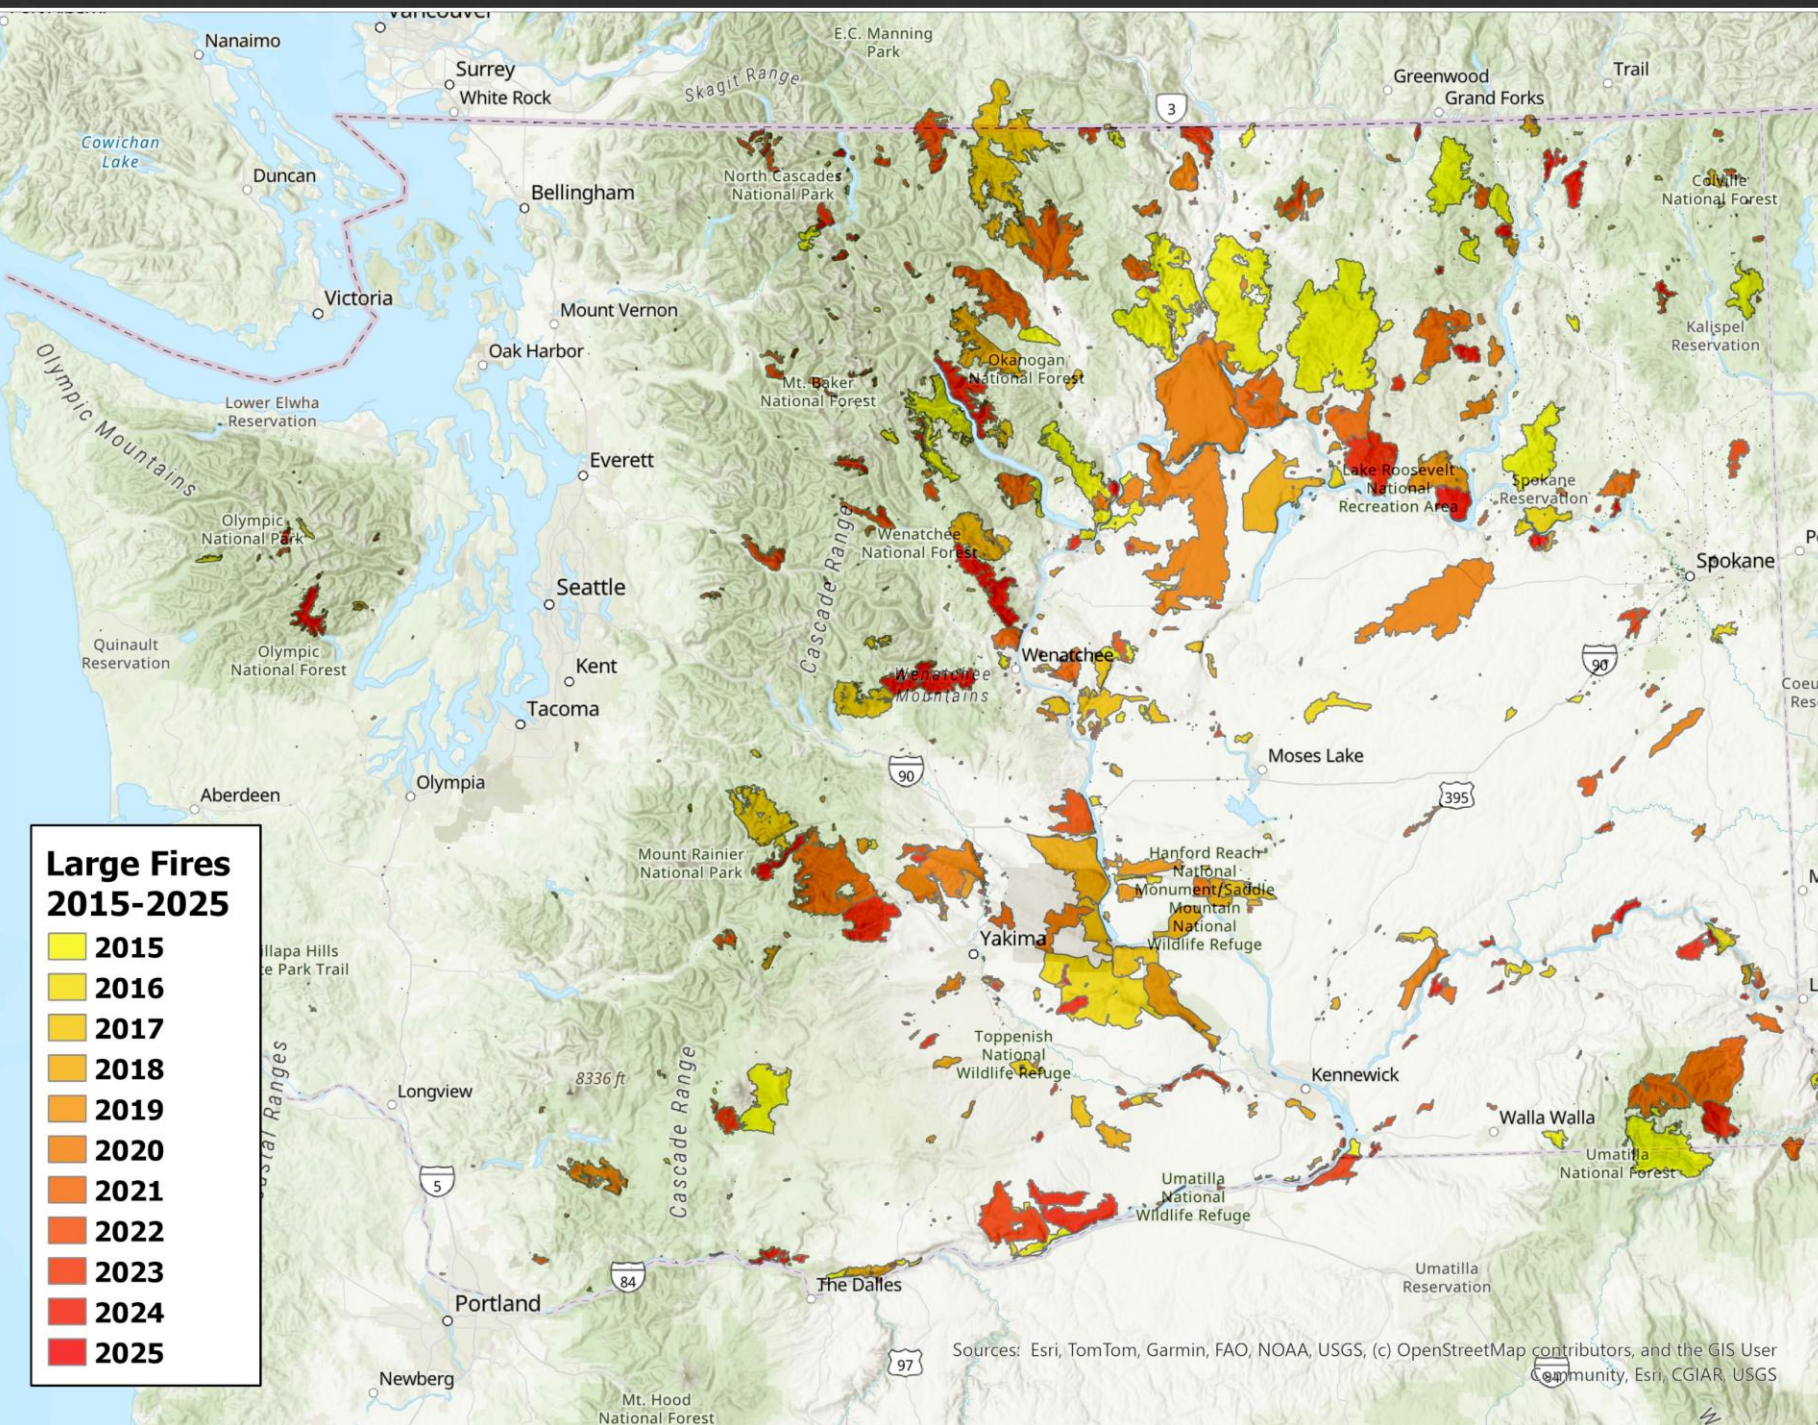

Molly Jackson, GISP

## The Issue: Escalating Wildfire Risk

- ◆ Increase in temperatures, drought and accumulated fuels
- ◆ Expansion of Wildland Urban Interface (WUI)
- ◆ How do agencies (land managers, fire professionals, municipalities, utilities) identify and mitigate risks to infrastructure, natural resources, and community safety?

# Large Fires 2015-2025 WA DNR

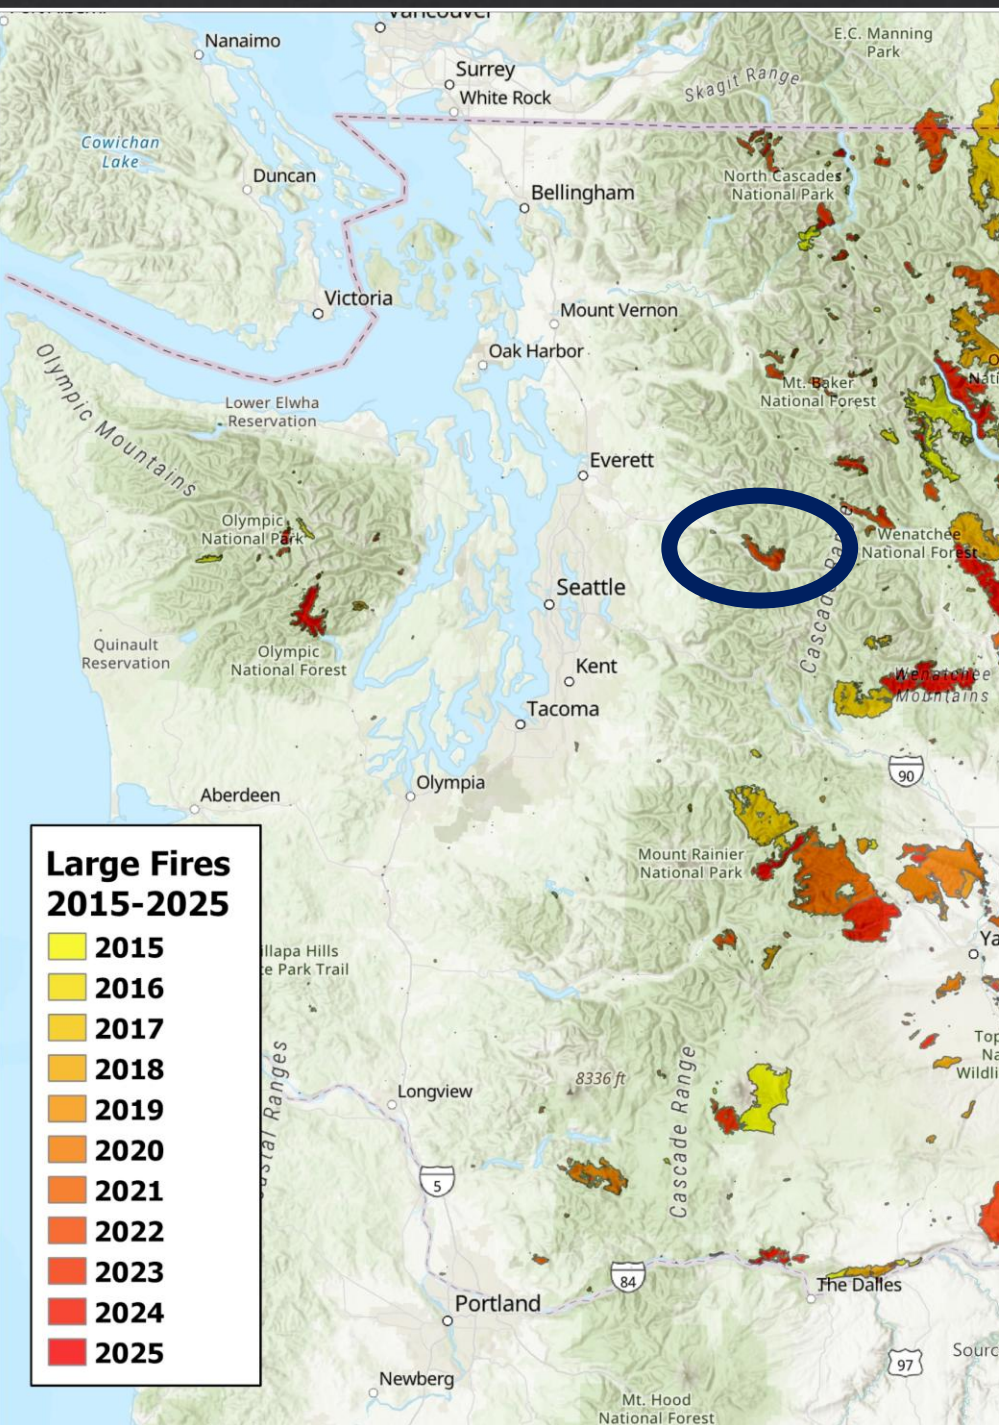

Sources: Esri, TomTom, Garmin, FAO, NOAA, USGS, (c) OpenStreetMap contributors, and the GIS User Community, Esri, CGIAR, USGS

- 2025

# Bear Gulch Fire 2025

# Understanding the Landscape

- ◇ **Vegetation, topography, and fuel conditions** are critical factors in fire risk.
- ◇ **Aerial Lidar** and **aerial imagery** provide detailed assessments of these factors to quantify wildfire risk, prioritize treatments, and identify vulnerabilities in the community.

# Risk Factors in the Landscape

- ◆ Fuels
- ◆ Slope
- ◆ Aspect
- ◆ Terrain
- ◆ Where do these higher risk areas intersect with human development?

Credit: Cal Fire

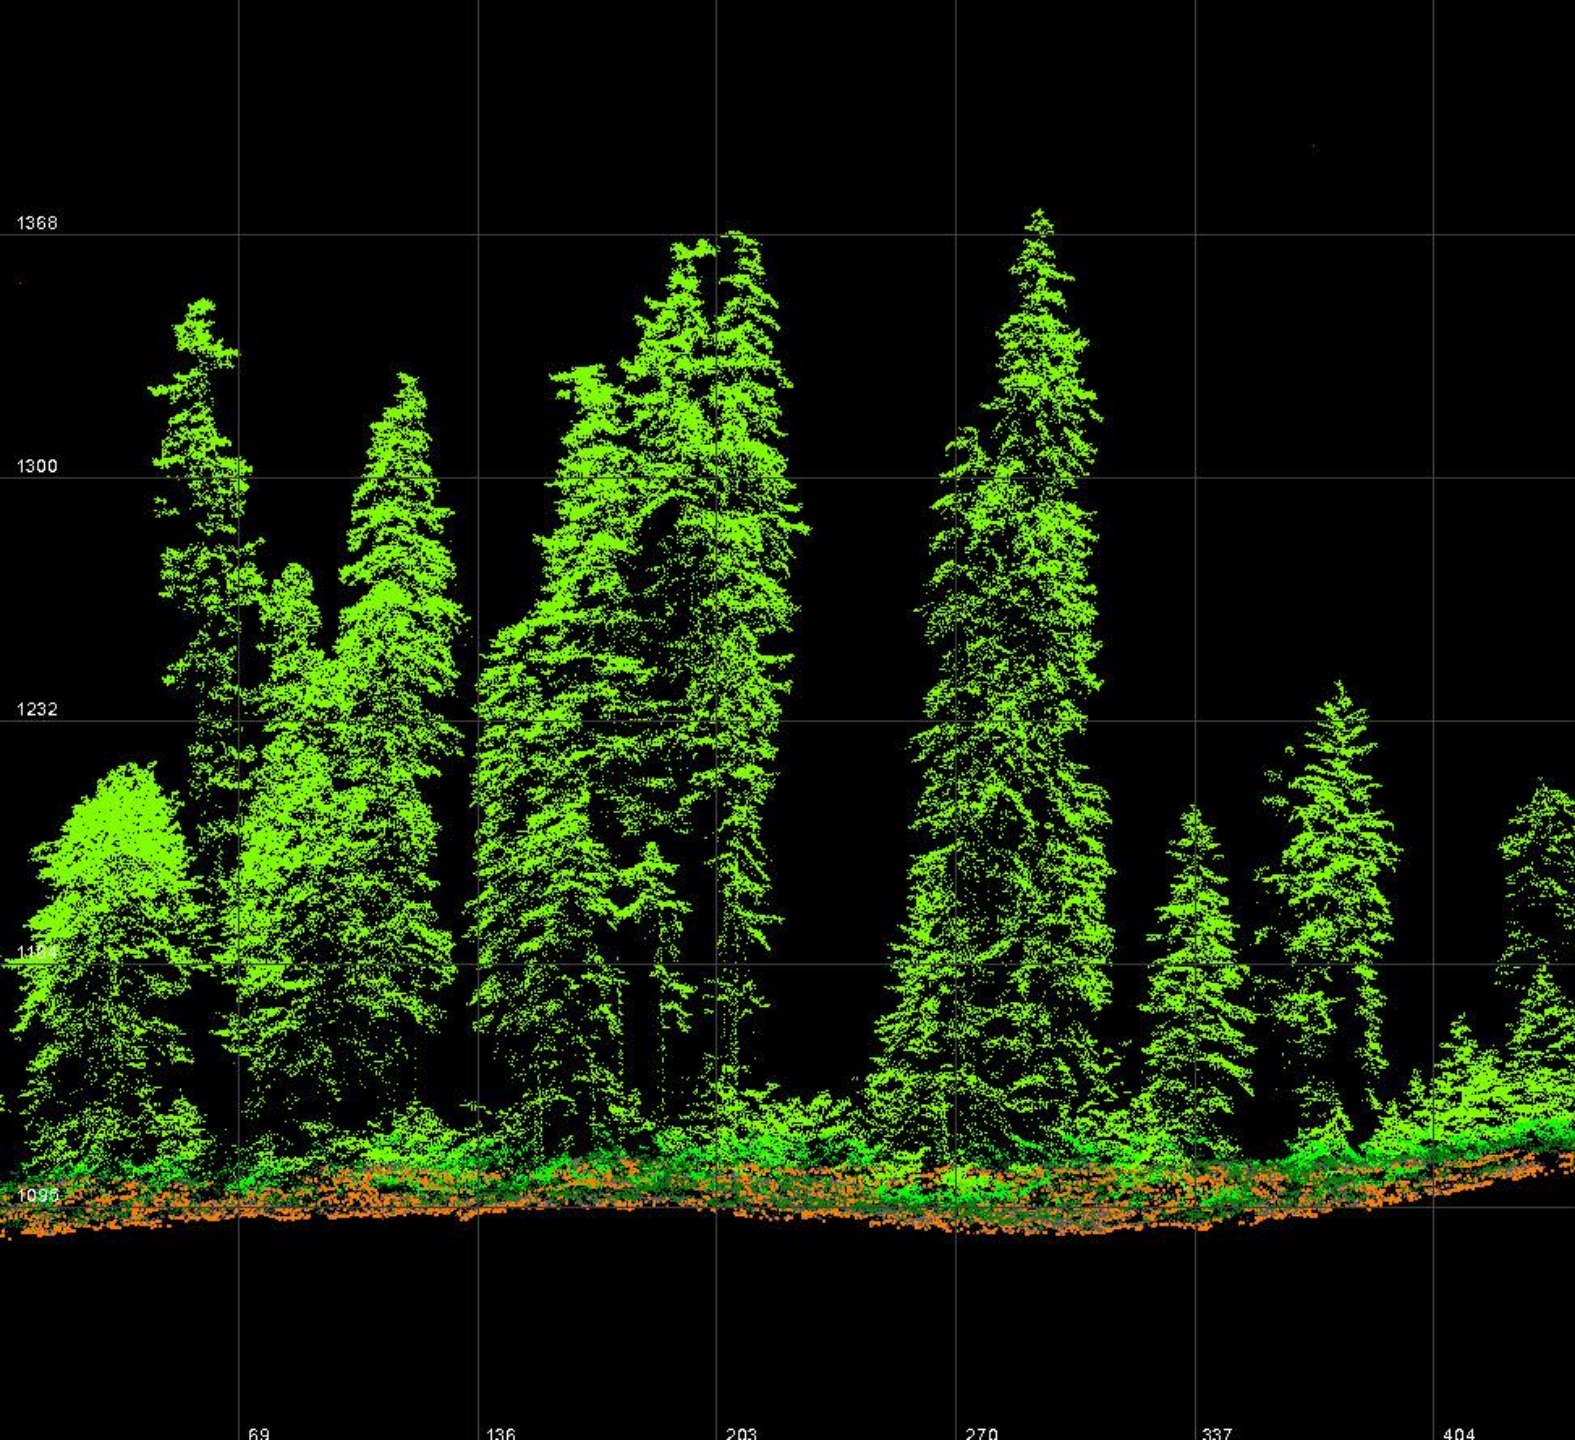

MINIMUM HORIZONTAL CLEARANCE

# Aerial Imagery

- ◆ Fixed-wing aircraft equipped with high resolution RGB and near infrared cameras
  - ◆ Produces:
    - ◆ High accuracy **orthomosaics**
    - ◆ **Feature data** (structures, transportation, utilities)
  - ◆ Uses:
    - ◆ Infrastructure and utility mapping
    - ◆ Canopy condition monitoring
    - ◆ Burn scar mapping
    - ◆ Change detection
    - ◆ Verification of Lidar classification

# Airborne Lidar

## ◆ Products:

- ◆ Dense, accurate **point clouds**
- ◆ **Lidar derivatives:** terrain, slope, aspect, vegetation classification

## ◆ Uses:

- ◆ Canopy height and density modeling
- ◆ DTM and surface modeling
- ◆ Fuels identification in relation to infrastructure
- ◆ Utility corridor and powerline vegetation clearance analysis

# GIS Integration and Analysis

- ◆ Products:
  - ◆ **Raster and vector base layers** (features, terrain-based rasters, vegetation polygons and grids)
  - ◆ **Spatial analyses** (buffer, intersections, etc.)
  - ◆ **Point Clouds** (vegetation segmented, etc.)
- ◆ Uses:
  - ◆ Fuels mapping and mitigation
  - ◆ Fire spread modeling inputs
  - ◆ Defensible space planning
  - ◆ Change detection

Slope >20%

SE→W Aspect

**Buildings & Defensible Space**

**Evacuation Route & Buffer**

**Powerlines & Buffer**

# Lidar

- Approximately 40 ppsm
- Classified into ground, buildings, 3 vegetation classes
- Classified using macros with manual cleanup and QC using ortho imagery

# Video

# VERTICAL CLEARANCE

## Ladder Fuels

A pathway for the fire to climb into higher canopy or into the upper stories of buildings.

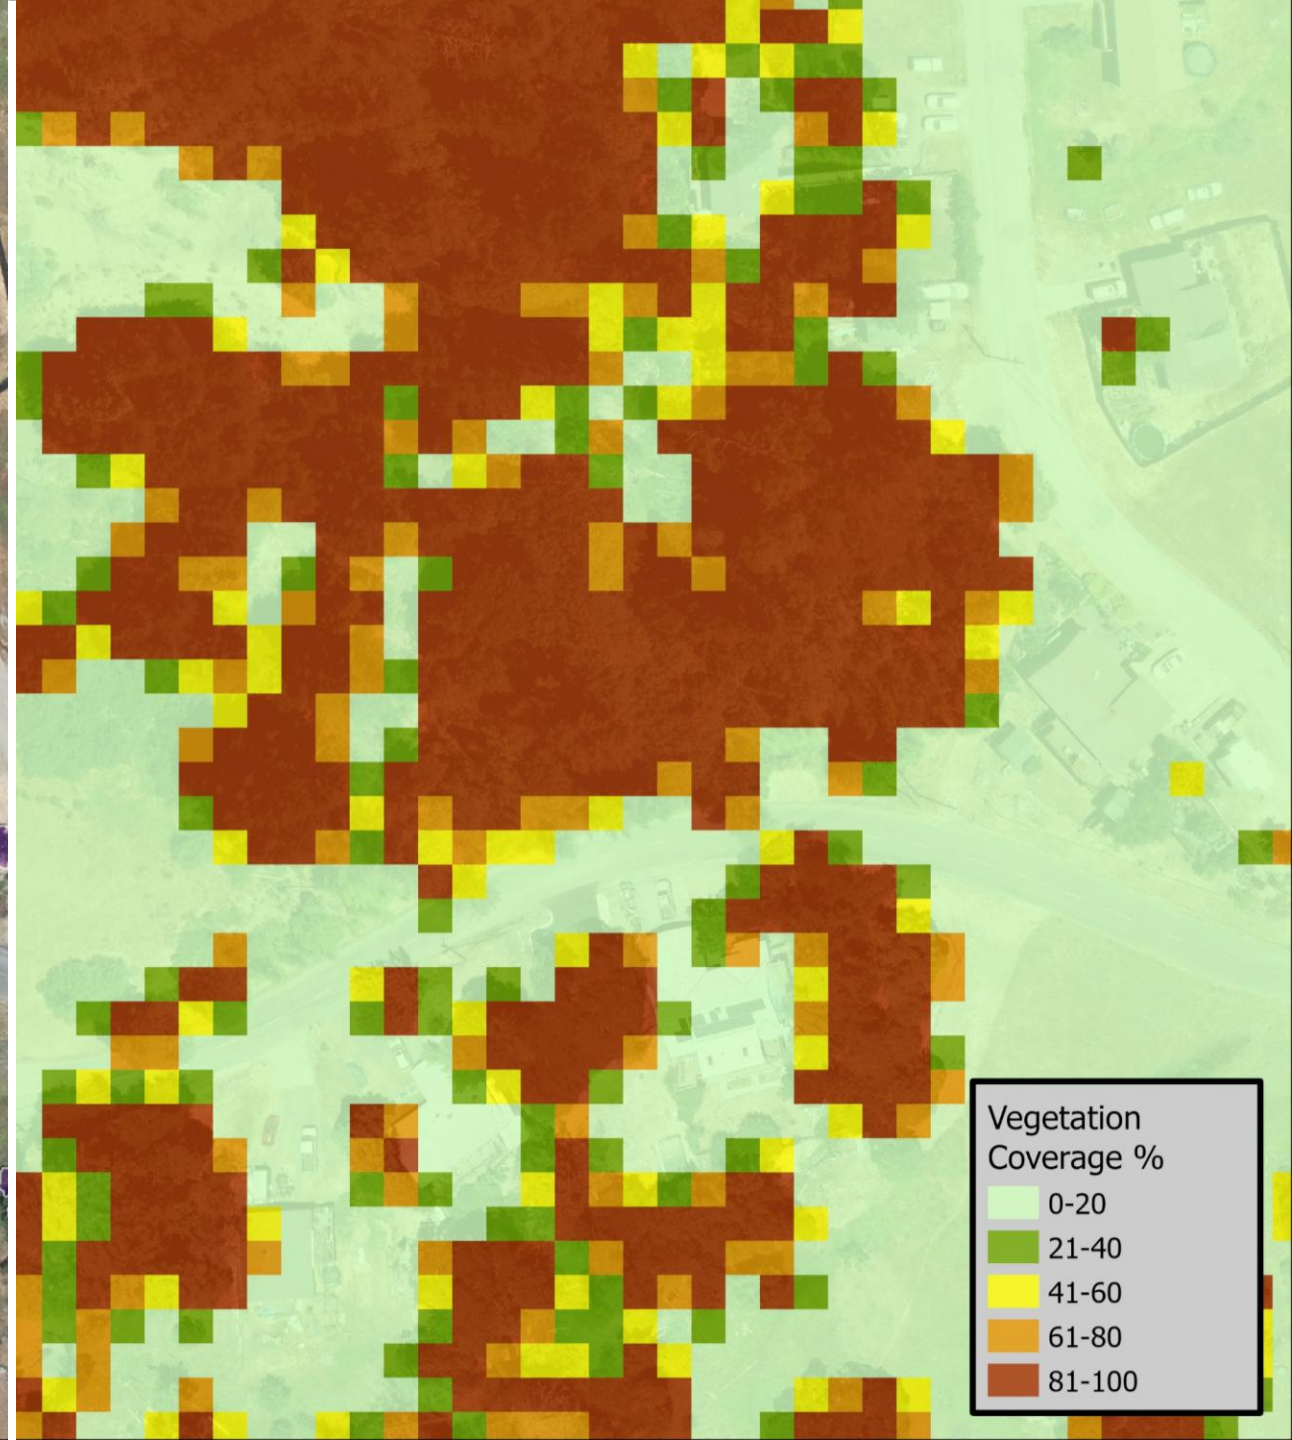

# Canopy Polygons

- ◇ Low (0-6 ft)
  - ◇ Least accurate
  - ◇ Requires most cleaning
- ◇ Medium (6-15 feet)
- ◇ High (15+ feet)

## Vegetation Metrics: Raster or Vector

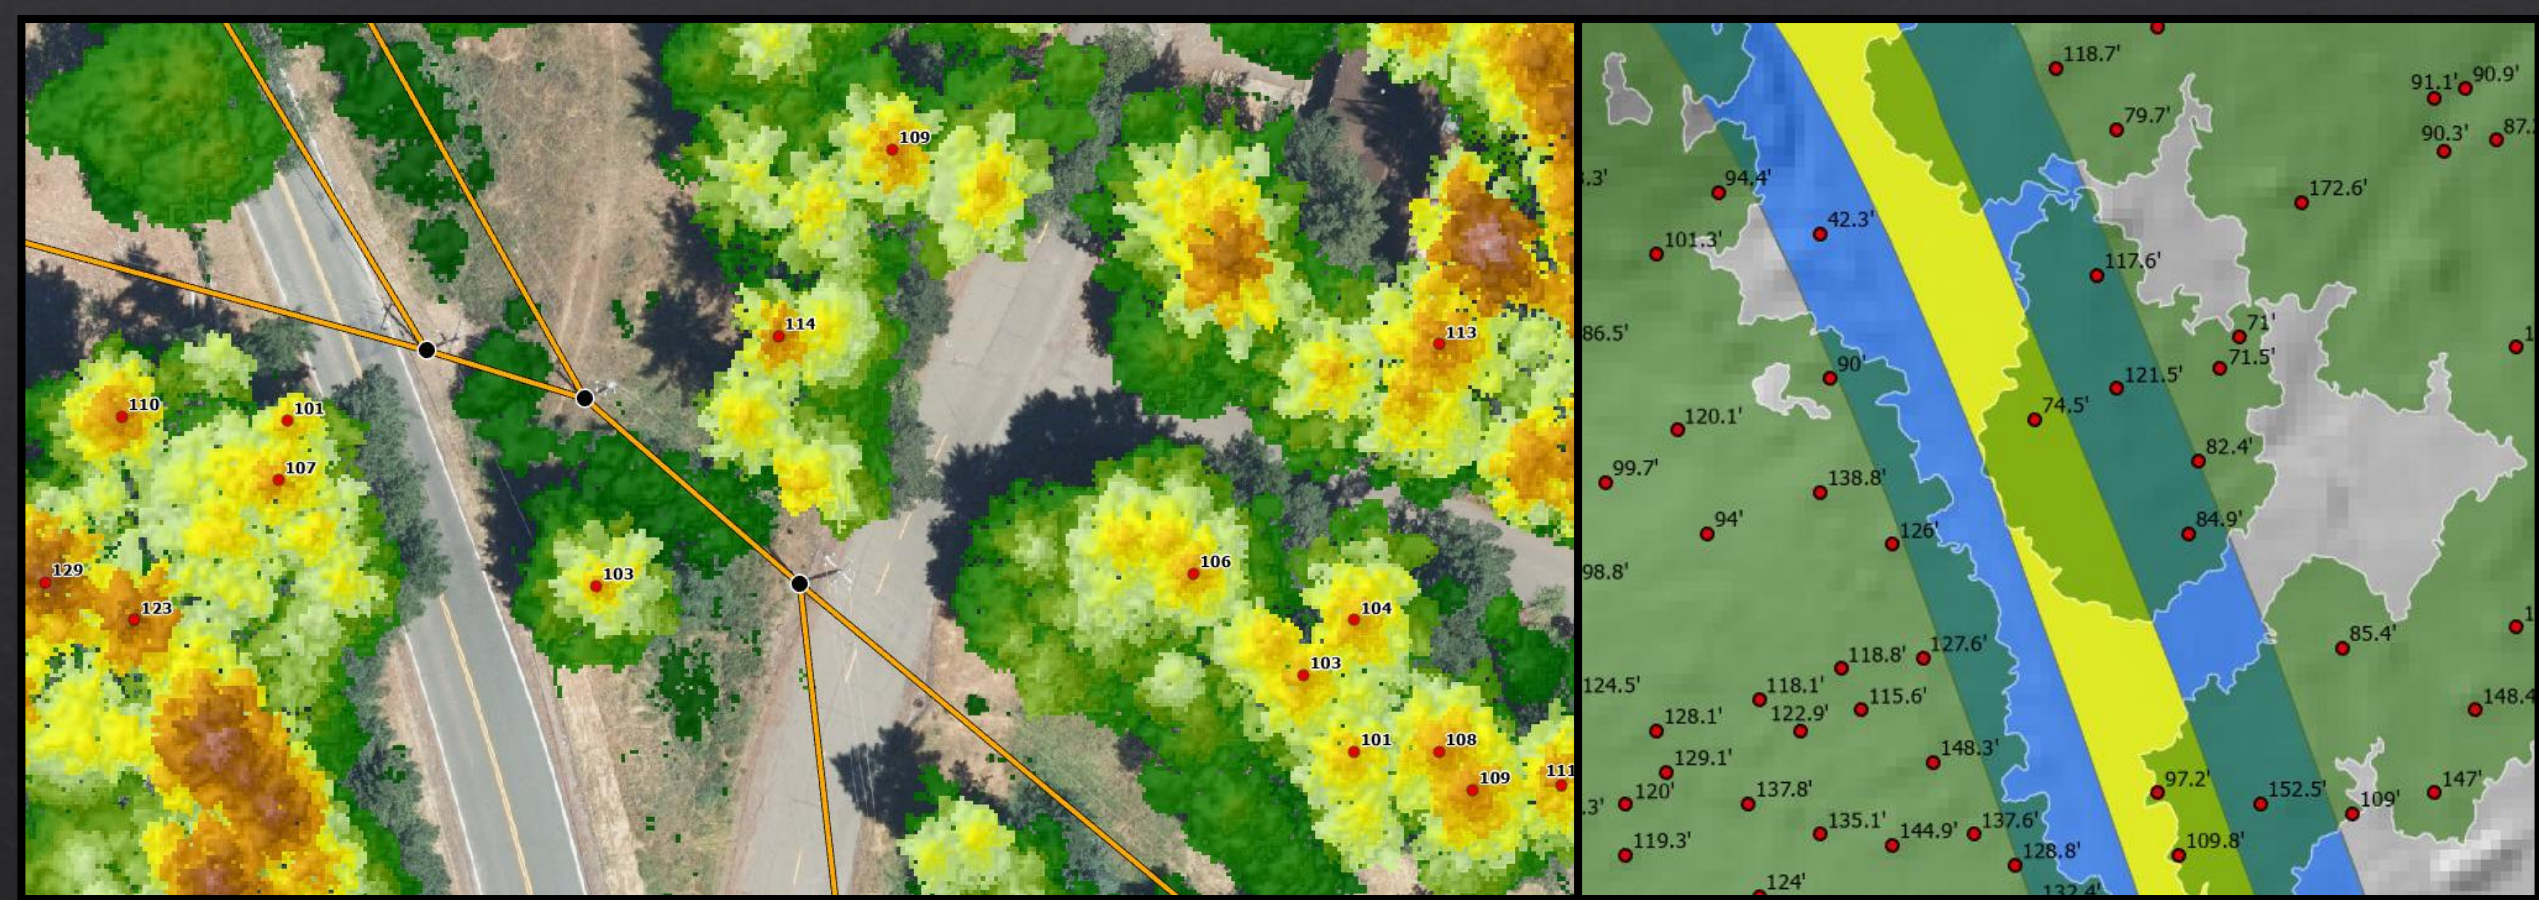

- ◇ Canopy Polygons (fuels classification and defensible space analysis)
- ◇ Canopy Height (used for fuels modeling)
- ◇ Canopy Density (fuels assessment)
- ◇ Individual Tree Heights

Video

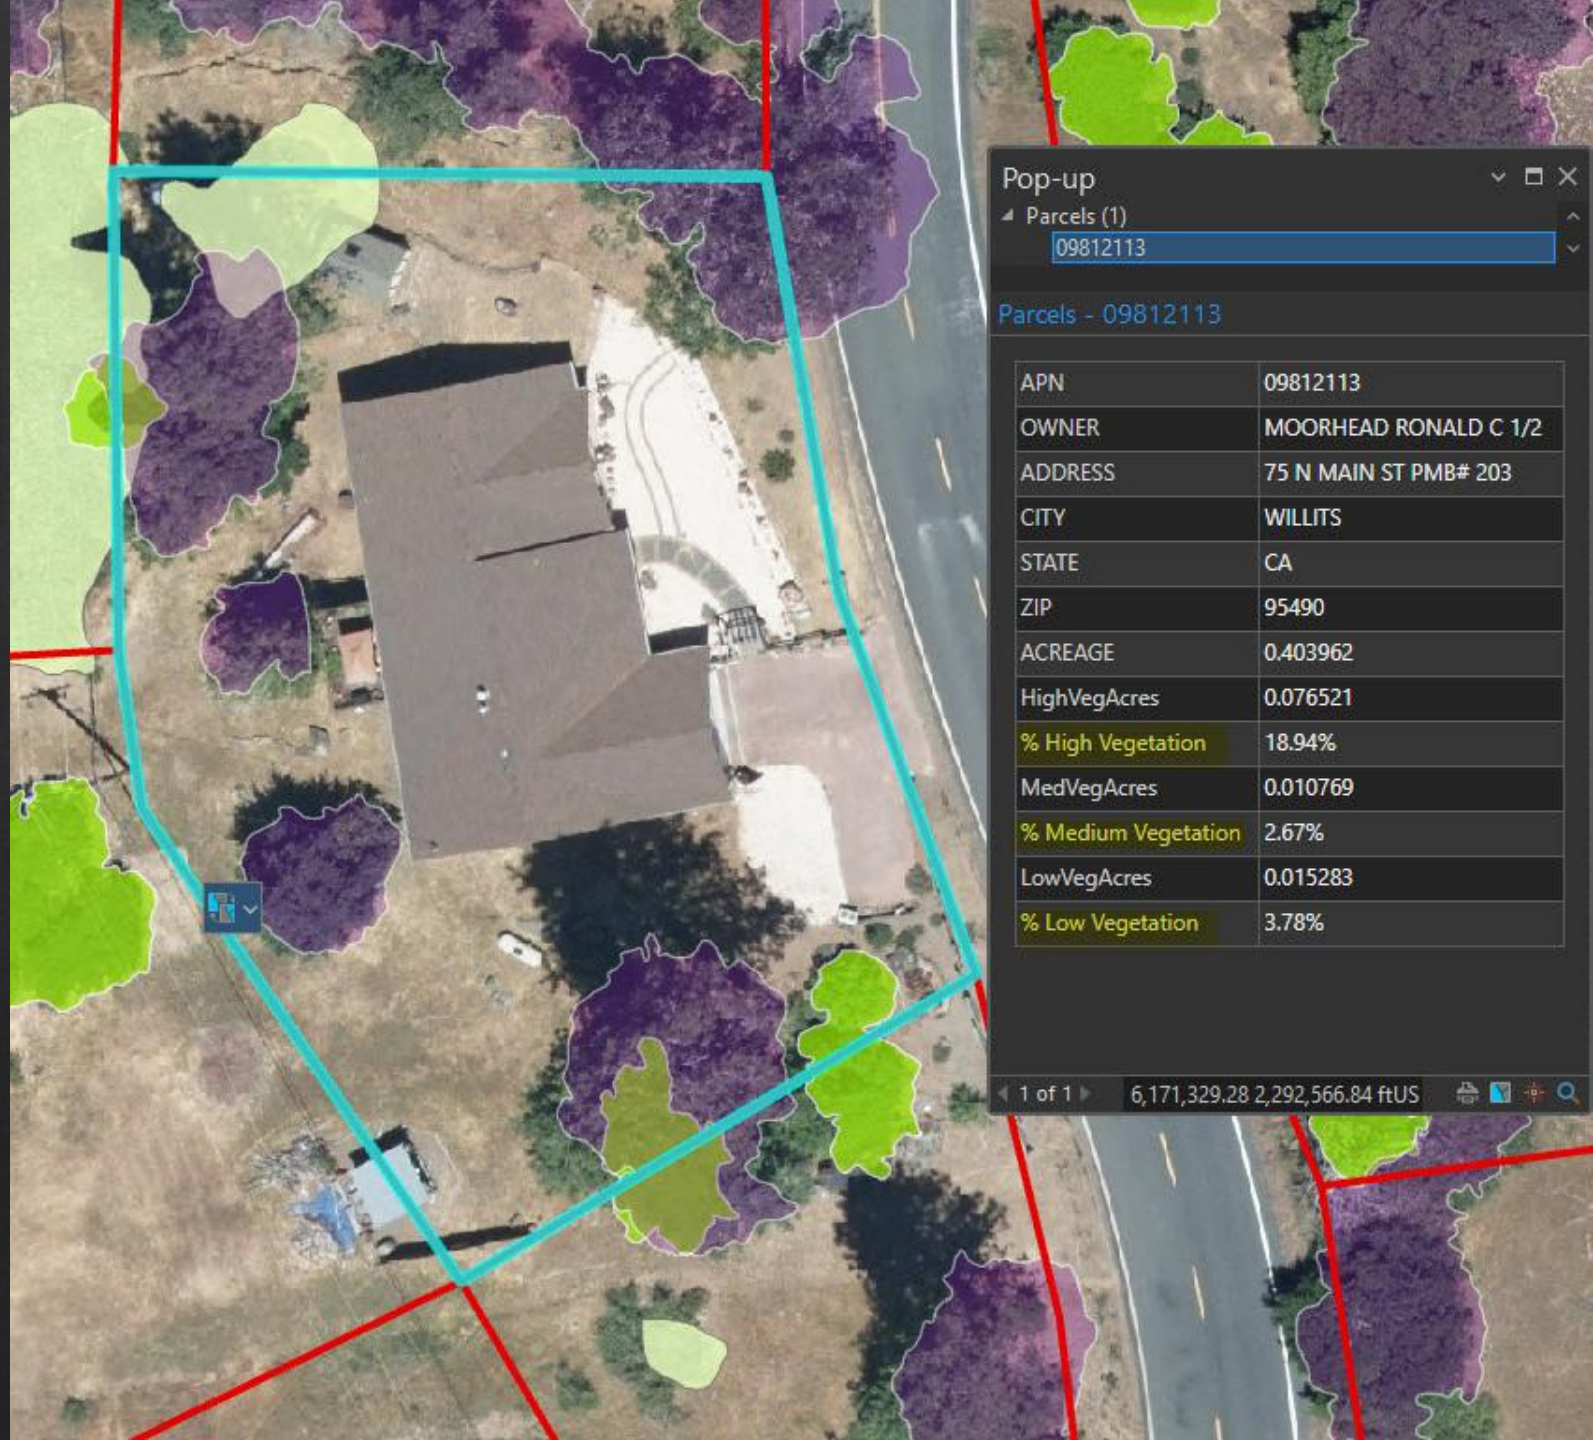

Where Do Fuels Meet Infrastructure?

Video

How do we  
make this data  
accessible to  
users and  
decision  
makers?

# What's next?

- ◆ Dynamic maps in the hand of decision-makers and homeowners in the wildland urban interface
- ◆ Community Wildfire Protection Plans
- ◆ FEMA Hazard Mitigation Plans

Questions?

Molly Jackson  
mjackson@geoterra.us

# Typical Deliverables

## Raster Products

- ◇ Bare Earth DEM (ground surface)
- ◇ Slope (key factor influencing wildfire spread)
- ◇ Aspect (supports analysis of solar exposure/moisture content of vegetation and soils)
- ◇ Highest Hit (vertical vegetation structure)
- ◇ Canopy Height (used for fuels modeling)
- ◇ Canopy Density (fuels assessment)
- ◇ Intensity (forest health assessments)

## 3D Vector Products

- ◇ Roofline polygons (structure risk assessment)
- ◇ Road polygons (access and evacuation exposure)
- ◇ Canopy polygons (fuels classification and defensible space analysis)
- ◇ Individual tree heights (identify hazard trees)
- ◇ Power lines and poles (vegetation encroachment evaluation)
- ◇ Contours

# What's next?

- ◇ **Local Funding/Partnering** possibilities:
  - ◇ Forestry/Natural Resources departments
  - ◇ Community Development departments
  - ◇ Fire Protection districts
  - ◇ Private Developers
  - ◇ Utility Districts
  - ◇ Conservation Districts
  - ◇ Tribal agencies
- ◇ **Federal and State Funding** possibilities:
  - ◇ Community Wildfire Defense grants
  - ◇ Wildland Urban Interface (WUI) Grant Program
  - ◇ Coalitions and Collaboratives AIM Grants
  - ◇ FEMA's Hazard Mitigation Assistance grant programs
  - ◇ State specific funding (i.e. WA DNR, CAL FIRE, etc.)
