

Git, Jenkins and Nexus...

...walk into an IBM i

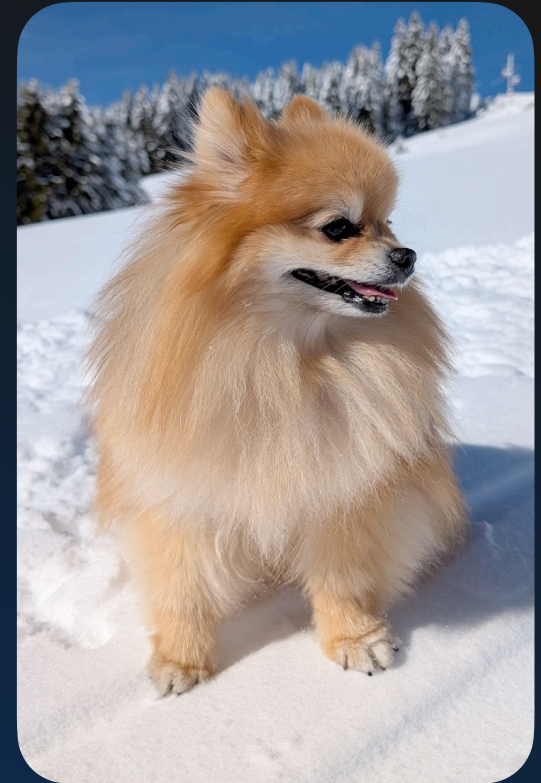

Who's this guy?

- Sébastien “Seb” Julliand
- Code for IBM i *core team* member
- IBM i Pipeline Steps Jenkins plugin core maintainer
- IBM Champion since 2024
- R&D Tech Lead at i and me - Training and consulting

- *Dog sold separately*

Jargon checkpoint

- *Build*: the process that will create the application's objects
- *Artifact*: the result of the build
- *Repository*: where the artifacts are stored
- *Versioning*: track each change iteration with a number
 - *e.g. semantic versioning*: major.minor.patch

Our Goals

Build once, deploy many times

Our Goals

- Build the application
 - A repeatable process
 - In a controlled environment
 - To produce an artifact
 - In one click

Our Goals

- Build the application
 - A repeatable process
 - In a controlled environment
 - To produce an artifact
 - In one click
- Store the artifact(s)
 - In a single, secure repository
 - With traceability - i.e. versioning (snapshot, release)
 - Used by other applications?

Our Goals

- Deploy the artifact(s)
 - Using a single process
 - Repeatable
 - Traceable
 - Using the same artifact everywhere

IT Training and Solutions GmbH

The Tools

Free range and well fed Open-source

The Tools

- Source code repository
 - GitLab

The Tools

- Source code repository
 - GitLab
- Build tool
 - gmake

The Tools

- Source code repository
 - GitLab
- Build tool
 - gmake
- Automation server
 - Jenkins

The Tools

- Source code repository
 - GitLab
- Build tool
 - gmake
- Automation server
 - Jenkins
- Artifacts repository
 - Sonatype Nexus

The Tools

- Source code repository
 - GitLab
- Build tool
 - gmake
- Automation server
 - Jenkins
- Artifacts repository
 - Sonatype Nexus
- A little bit of glue
 - Maven

The Tools - **some alternatives**

- Source code repository
 - GitLab, **GitHub**, **BitBucket**, **Azure**, **GitBucket** (runs on IBM !!)
- Build tool
 - gmake, **TOBi**, **shell script**, **CL**, **third-party tools...**
- Automation server
 - Jenkins, **GitHub actions**, **GitLab CICD**, ...
- Artifacts repository
 - Sonatype Nexus, **JFrog Artifactory**, **shared folder** (IFS, SSH, SFTP...)
- A little bit of glue
 - Maven, **shell script**

The Tools - separation of duty

- Source code repository
 - Stores the source code
- Build tool
 - Holds the build logic - only the build logic
- Automation server
 - Runs the build and packages it
- Artifacts repository
 - Stores the packages
- A little bit of glue
 - Uploads/downloads packages

Jenkins

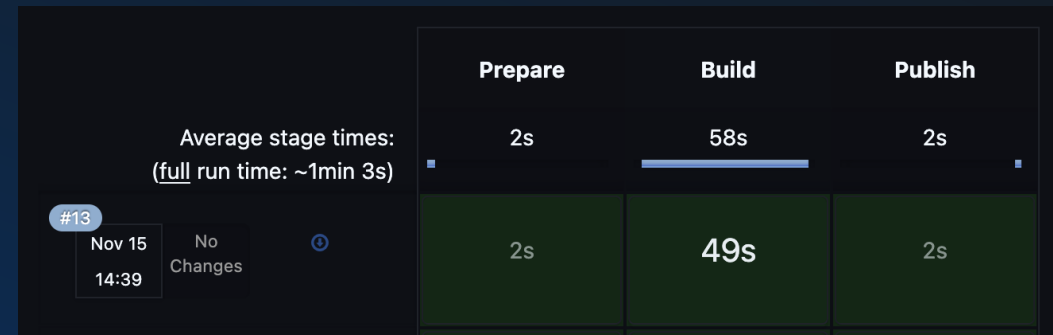

Pipelines and the IBM i pipeline steps plugin

Jenkins - the Pipelines

- Process described as code
 - in the job configuration
 - or
 - in the project itself: jenkinsfile

```
Pipeline script
Script ?
1 ~ node {
2 ~   stage('Prepare') {
3 ~     dir('company_system') {
4 ~       git branch: params.Branch, url: 'git@github.com:sebjulliand/company_system.git', creden
5 ~     }
6 ~   }
7 ~
8 ~   stage('Build') {
9 ~     onIBMi(server:'PUB400') {
10 ~       def buildLibrary = "SEBJUB";
11 ~       def projectDirectory = "/home/sebju/builds/company_system";
12 ~       ibmiCommand command: "RMDIR DIR('$projectDirectory') SUBTREE(*ALL)", failOnError: false
13 ~       ibmiPutIFS from: 'company_system', to: projectDirectory
14 ~       ibmiCommand command: "CLRLIB LIB($buildLibrary)"
15 ~
16 ~       def build = ibmiShellExec "cd $projectDirectory; chmod +x ./build.sh; ./build.sh $build
17 ~       writeFile encoding: "UTF-8", file: "build.txt", text: build.output()
18 ~     }
19 ~   }
20 ~ }
```

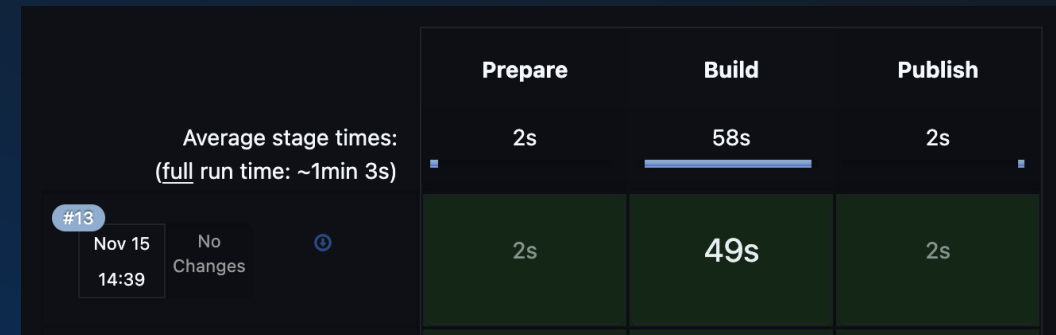

Jenkins - the Pipelines

- Process described as code
 - in the job configuration or
 - in the project itself: jenkinsfile
- Describes the build logic: build, test, deploy...

```

Pipeline script
Script ?
1 ~ node {
2 ~   stage('Prepare') {
3 ~     dir('company_system') {
4 ~       git branch: params.Branch, url: 'git@github.com:sebjulliand/company_system.git', creden
5 ~     }
6 ~   }
7 ~
8 ~   stage('Build') {
9 ~     onIBMi(server: 'PUB400') {
10 ~       def buildLibrary = "SEBJUB";
11 ~       def projectDirectory = "/home/sebju/builds/company_system";
12 ~       ibmiCommand command: "RMDIR DIR('$projectDirectory') SUBTREE(*ALL)", failOnError: false
13 ~       ibmiPutIFS from: 'company_system', to: projectDirectory
14 ~       ibmiCommand command: "CLRLIB LIB($buildLibrary)"
15 ~
16 ~       def build = ibmiShellExec "cd $projectDirectory; chmod +x ./build.sh; ./build.sh $build
17 ~       writeFile encoding: "UTF-8", file: "build.txt", text: build.output()
18 ~

```

Jenkins - the Pipelines

- Process described as code
 - in the job configuration or
 - in the project itself: jenkinsfile
- Describes the build logic: build, test, deploy...
- Divided into simple parts

```

Pipeline script
Script ?
1 ~ node {
2 ~   stage('Prepare') {
3 ~     dir('company_system') {
4 ~       git branch: params.Branch, url: 'git@github.com:sebjulliand/company_system.git', creden
5 ~     }
6 ~   }
7 ~
8 ~   stage('Build') {
9 ~     onIBMi(server:'PUB400') {
10 ~       def buildLibrary = "SEBJUB";
11 ~       def projectDirectory = "/home/sebju/builds/company_system";
12 ~       ibmiCommand command: "RMDIR DIR('$projectDirectory') SUBTREE(*ALL)", failOnError: false
13 ~       ibmiPutIFS from: 'company_system', to: projectDirectory
14 ~       ibmiCommand command: "CLRLIB LIB($buildLibrary)"
15 ~     }
16 ~
17 ~     def build = ibmiShellExec "cd $projectDirectory; chmod +x ./build.sh; ./build.sh $build
18 ~     writeFile encoding: "UTF-8", file: "build.txt", text: build.output()

```

Jenkins - the Pipeline steps

- Open source plugin
 - Download from Jenkins marketplace
 - <https://plugins.jenkins.io/ibmi-steps>

- Steps
 - onIBMi
 - ibmiCommand
 - ibmiShellExec
 - ibmiRunSQL
 - ibmiGetSAVF
 - ibmiPutSAVF
 - ibmiGetIFS
 - ibmiPutIFS
 - ibmiGetSPLF
 - ibmiWaitJob

Jenkins - the Pipeline steps

- Open source plugin
 - Download from Jenkins marketplace
 - <https://plugins.jenkins.io/ibmi-steps>
- Provides IBM i specific steps
 - run CL command
 - run shell command
 - run SQL queries
 - IFS transfers
 - SAVF transfers
 - download spooled files

- Steps
 - onIBMi
 - ibmiCommand
 - ibmiShellExec
 - ibmiRunSQL
 - ibmiGetSAVF
 - ibmiPutSAVF
 - ibmiGetIFS
 - ibmiPutIFS
 - ibmiGetSPLF
 - ibmiWaitJob

Sonatype Nexus Repository

The Artifact Repository

Sonatype Nexus Repository

- Binary repository
 - artifacts
 - packages
 - metadata
 - ...

Sonatype Nexus Repository

- Binary repository
 - artifacts
 - packages
 - metadata
 - ...
- Runs on Java

Sonatype Nexus Repository

- Binary repository
 - artifacts
 - packages
 - metadata
 - ...
- Runs on Java
- Community edition is free and open-source

Apache *Maven*TM

But why?! 🤯

Apache Maven

- Used for building Java project...initially

Apache Maven

- Used for building Java project...initially
- Usable in other scenarios!
 - Thanks to a large collection of plugins

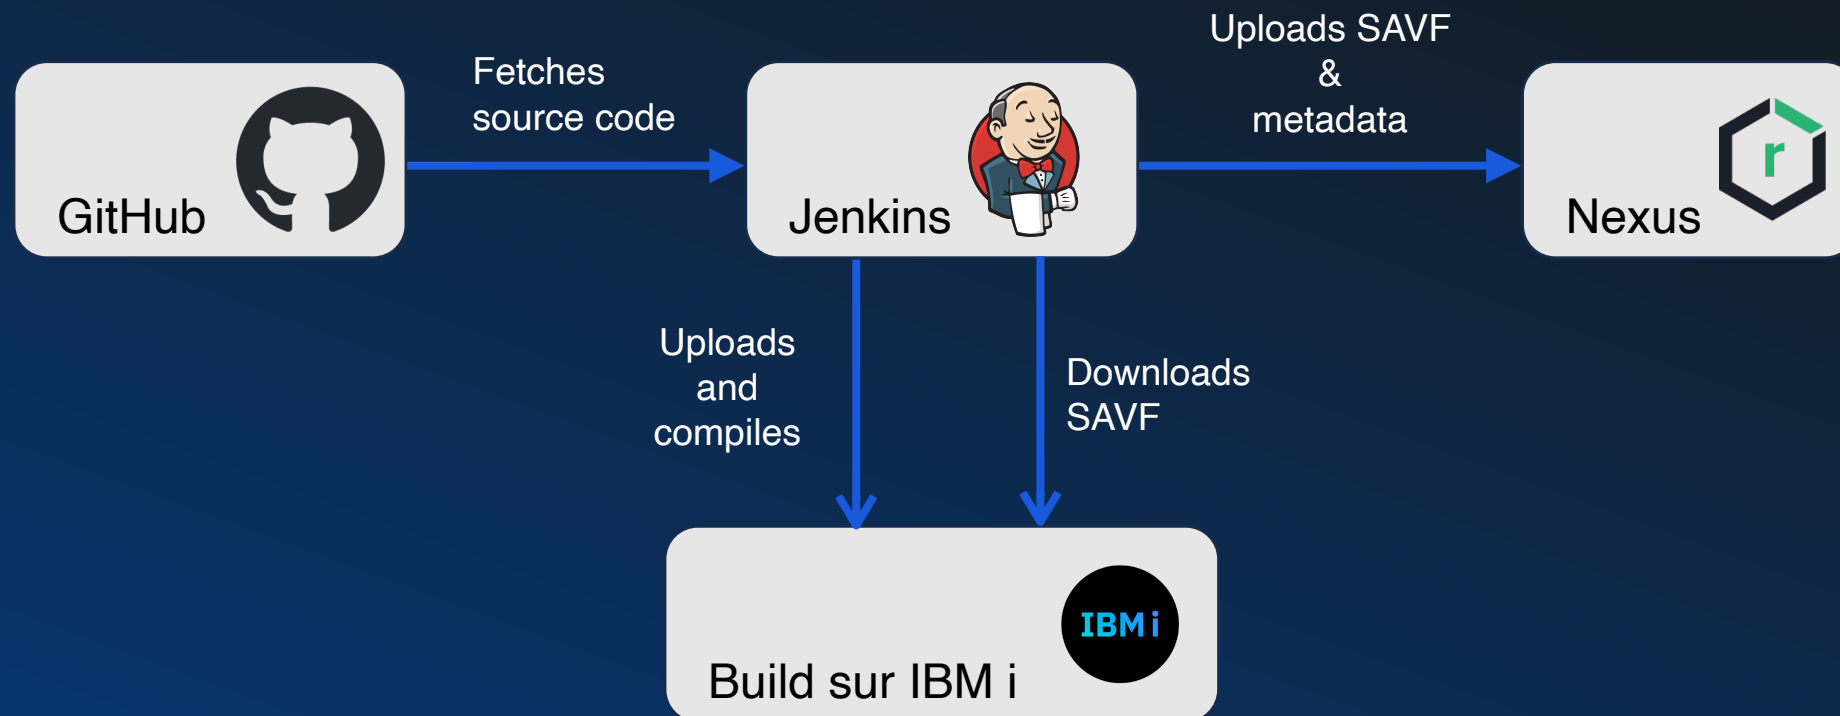

Apache Maven

- Used for building Java project...initially
- Usable in other scenarios!
 - Thanks to a large collection of plugins
- In our specific case
 - Agnostic management of artifacts transfers
 - Versioning enforcement
 - Could also manage inter-applications dependencies

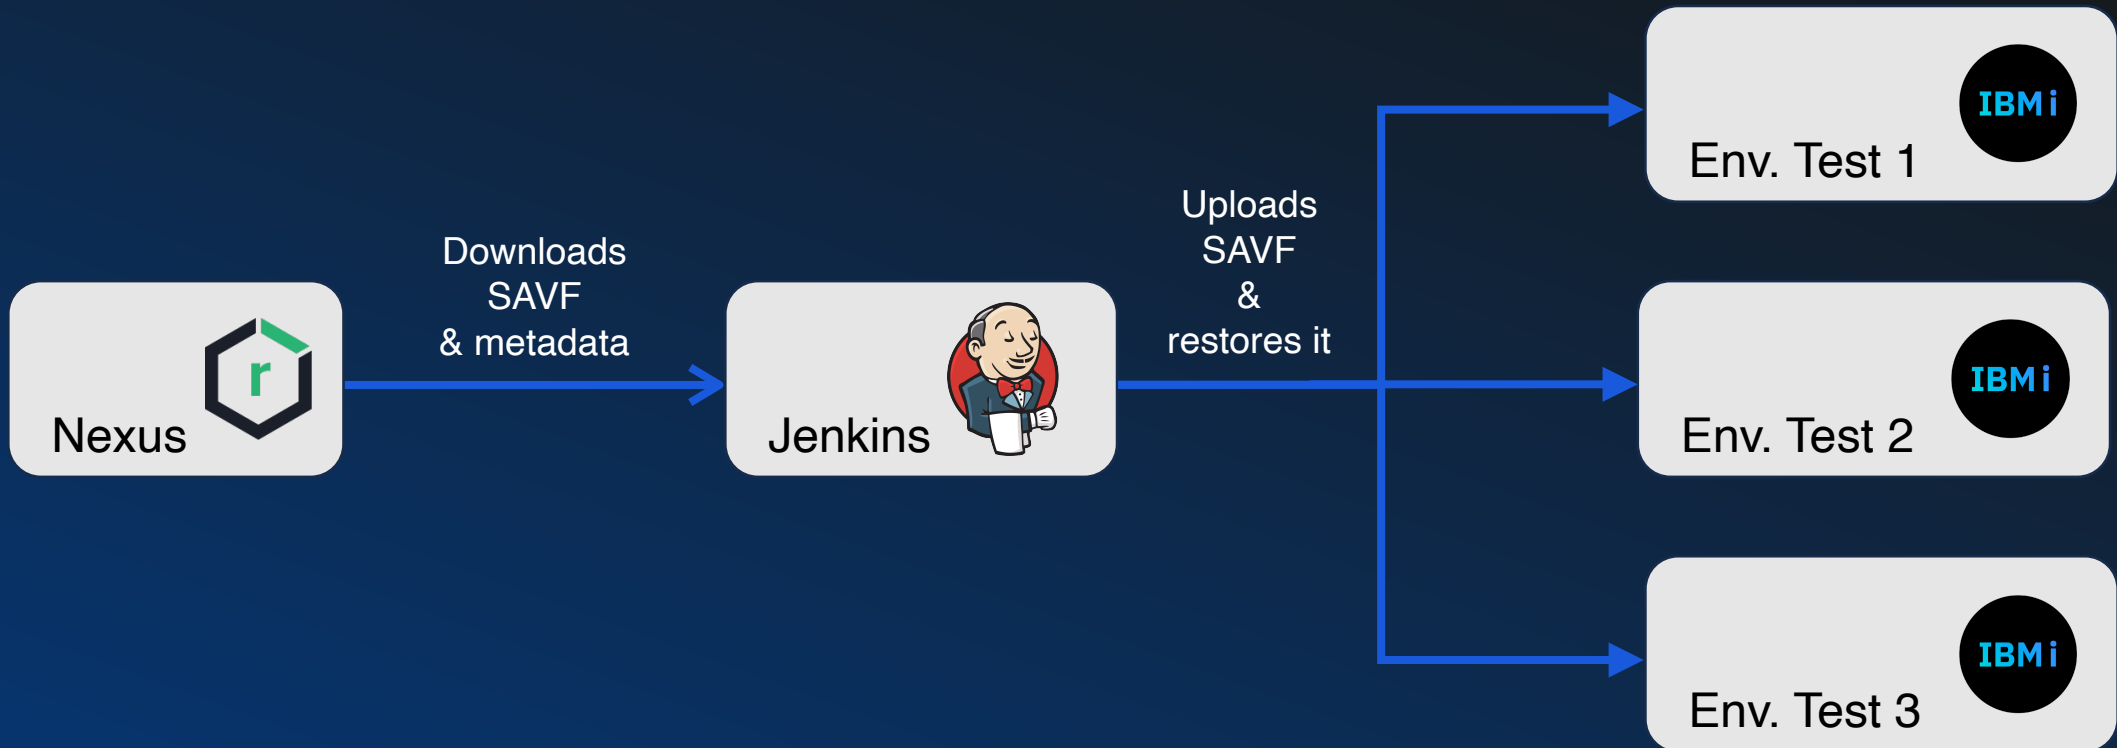

The process

In theory 

Build once...

...deploy many times

The process

Live! 

Any questions?

Don't be shy!

Key Takeaway

- 1 click build
- 1 click deployment
- Easy to monitor
- Flexible
 - It's a big game of Lego
 - Each “brick” can be swapped (except IBM i)
- The whole pipeline can run on IBM I
 - Using Jenkins, Nexus and GitBucket
- Bonus: Jenkins is not only for application build

Mastering the future - together.

THANK YOU

For your attention.

See you tomorrow!

- Design your own VS Code extension and extend Code for IBM I
- VS Code/Code for IBM i hidden gems
- Code for i: What's new, what's next?

Any Question? info@iandme.rocks
