Trust starts before the click

your-bank.com

one letter changes

your-bna**k.com**

Which one do you trust?

DNS decides where a click lands

Nobody thinks about it while it works. Trust depends on it.

When trust breaks, it breaks quietly

It rarely looks like an attack. It looks like a normal click.

01

One look-alike
domain

02

One click

03

One customer's
lost trust

04

A business
problem

Business is global. Rules are local

The domain is the same. The environment changes at every border.

No one group can secure trust alone

Cybersecurity is not only a technical issue.

It is about trust, governance and growth. That is why the multistakeholder model matters.

From many rulebooks to one view

🔍 Global Compliance Intelligence — 30 Jurisdictions

Enterprise-Grade Compliance for Cross-Border Operations

DJAC Platform — Global Compliance Intelligence

Navigate GDPR, CCPA, PIPL, PDPL, LGPD, and 40+ frameworks in one workspace. Real-time conflicts, AI answers, and global gap analysis.

Multi-Jurisdiction Mapping

GDPR, CCPA, PIPL, PDPL, LGPD, and 40+ frameworks — all in one place.

Conflict Detection in Seconds

Our relationship engine flags hidden clashes across jurisdictions before they become fines.

Multi-Language AI Co-Pilot

Ask in Arabic, Chinese, English, or Spanish — get cited regulatory answers instantly.

Global Market Entry Scan

Know your compliance gaps in any jurisdiction before you launch — not after a regulator calls.

Legal Library

Every regulation, obligation, and penalty searchable in plain language across 30 jurisdictions.

Cost savings vs. law firms

A trusted Internet enables trusted digital growth

The future of the Internet is not only about connecting more people. It is about making those connections trustworthy.
