# TREC Transportation Resource Hub

TRANSPORTATION RESEARCH  
and EDUCATION CENTER

**BikePed Portal**

The Hub is funded through the Consolidated Appropriations Act of 2024 and administered through NIST.

Resource center **supporting local, regional, and state agencies and tribal governments** across Oregon by **providing training, technical assistance, and technology transfer services** to help meet state and local decarbonization goals while enhancing livability, economic opportunity, and community outcomes.

# Overview

...Benefits?

A guide!

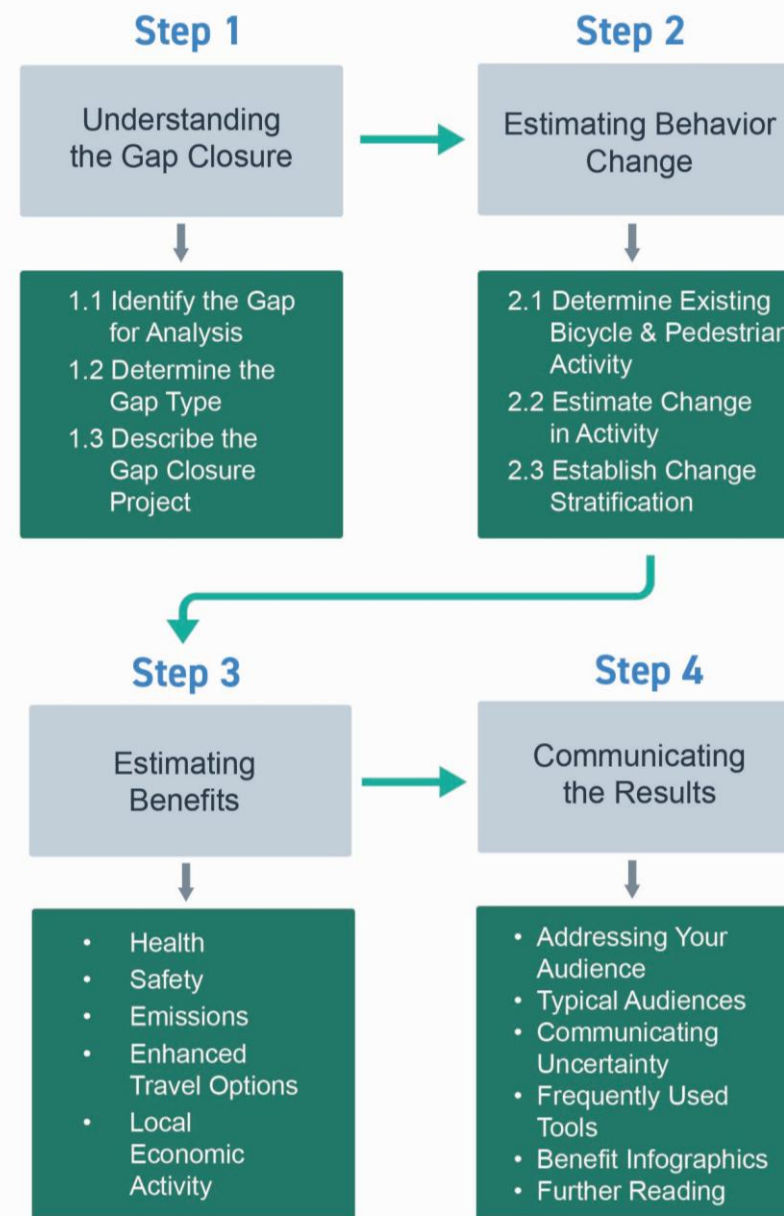

A tool!

# The Guide

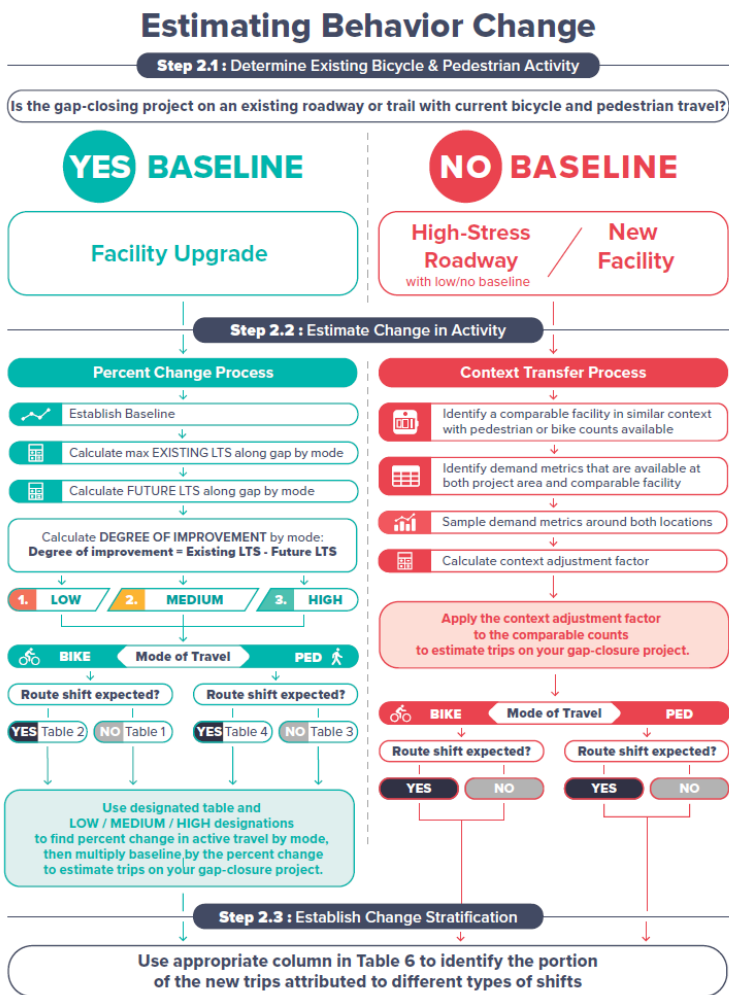

## NCHRP 1149: Estimating Benefits of Closing Gaps in Active Transportation Networks: A Guide (2026)

- Gaps
  - missing infrastructure
  - substandard facilities
- Behavior change
  - walking and biking estimates after gap closure
  - stratification: new activity, shift from vehicles, route shift, shift from walk/transit
- Monetized Benefits (Basic, Enhanced, Advanced)
  - Health
  - Safety
  - Emissions
  - Travel Options
- And more!

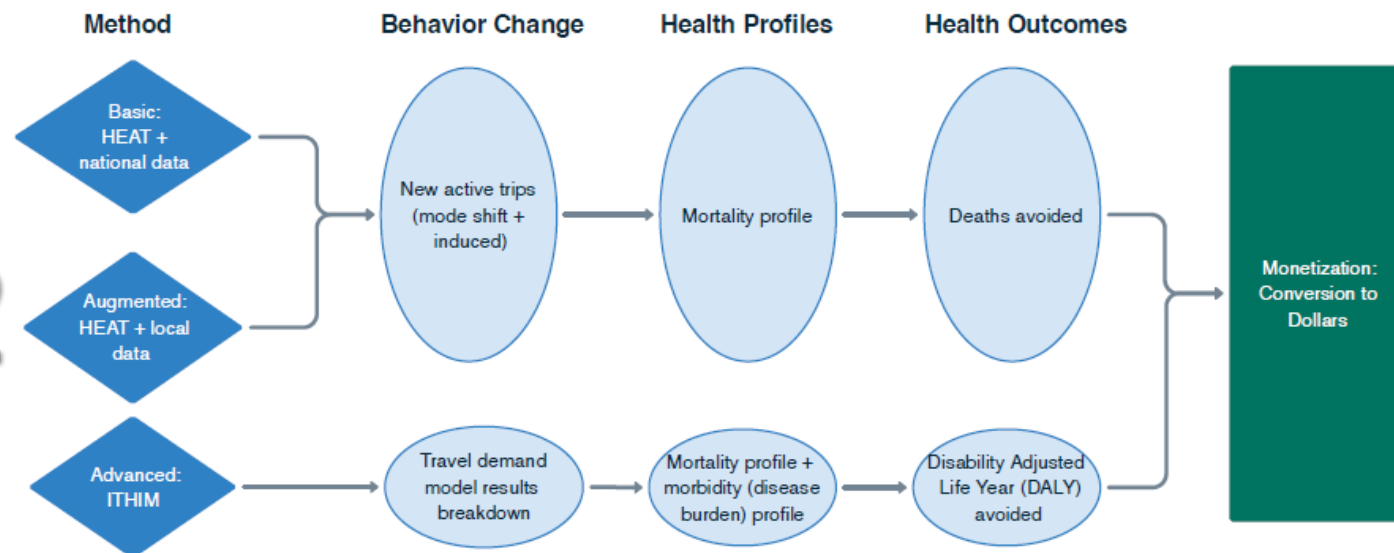

# The Tool

1

2

3

$$\text{Estimated health benefits from walking} = \text{New walking trips per day for all ages} \times \text{Percent of 20-74 age range} \times \text{Health benefits per trip in that age group} \times 365 \text{ days}$$

$$\text{Estimated health benefits from bicycling} = \text{New bicycling trips per day for all ages} \times \text{Percent of 20-64 age range} \times \text{Health benefits per trip in that age group} \times 365 \text{ days}$$

Table 9. National multiple-Mode BCA Guidance.

Mode	Per trip benefit	% of population in age range
Walking	\$7.63	68% 20-74 years
Bicycling	\$6.80	59% 20-64 years

Source: U.S. DOT (2023a).

**Streamlined Basic Calculations**

# The Goal

- 1 Bring your gap, a project (proposed or actual), and bare minimum data to establish usage
- 2 Input basic information into a guided spreadsheet tool
- 3 Leave with outputs of behavior change and benefit estimates, along with a snapshot of calculations, assumptions, and references all in one place
- 4 Use the Guide to better understand and communicate your results (and explore more advanced methods—everything is modular!)

# Example: Bike Lane Upgrade

## Example Case Study Bicycle

---

**Name:** Protected Bike Lane

**User Type:** Bicycle

**Proposed Gap Type:** Substandard infrastructure

**Length of Facility in Miles:** 1

**Is there Significant route shift:** Yes

### Other Information Needed for Behavior Change

**Baseline Ridership:** For Bicycles

**Annual Average Daily Baseline User Count:** 100

**Previous LTS:** 3

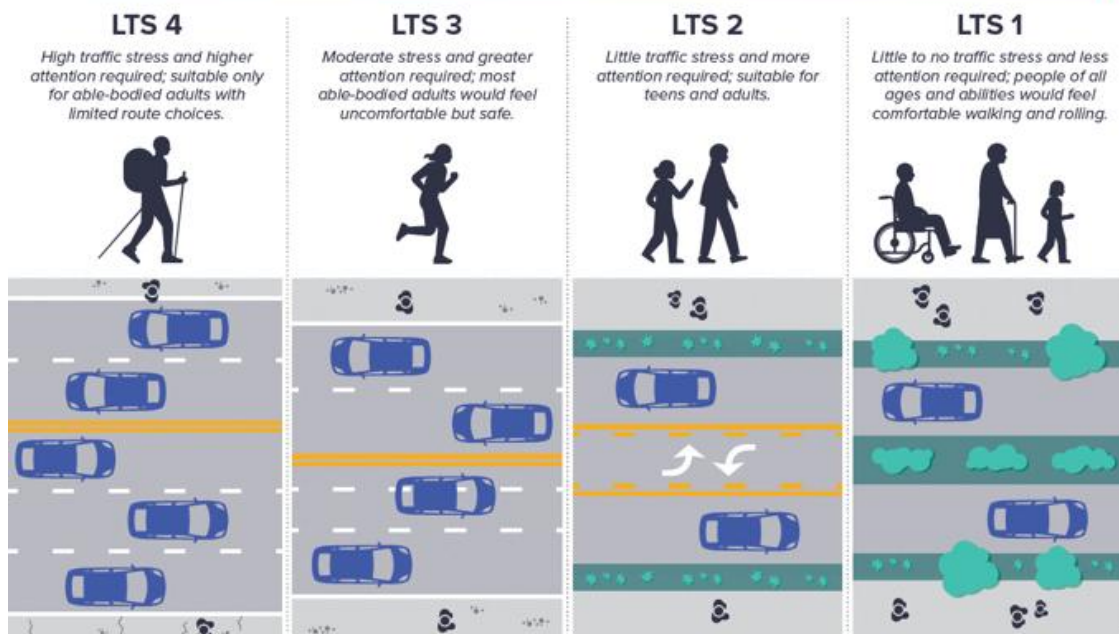

**Post-Project LTS:** 2

# Level of Traffic Stress

## PEDESTRIAN LEVEL OF TRAFFIC STRESS

INCREASING LEVEL OF COMFORT, SAFETY, AND INTEREST IN WALKING FOR TRANSPORTATION

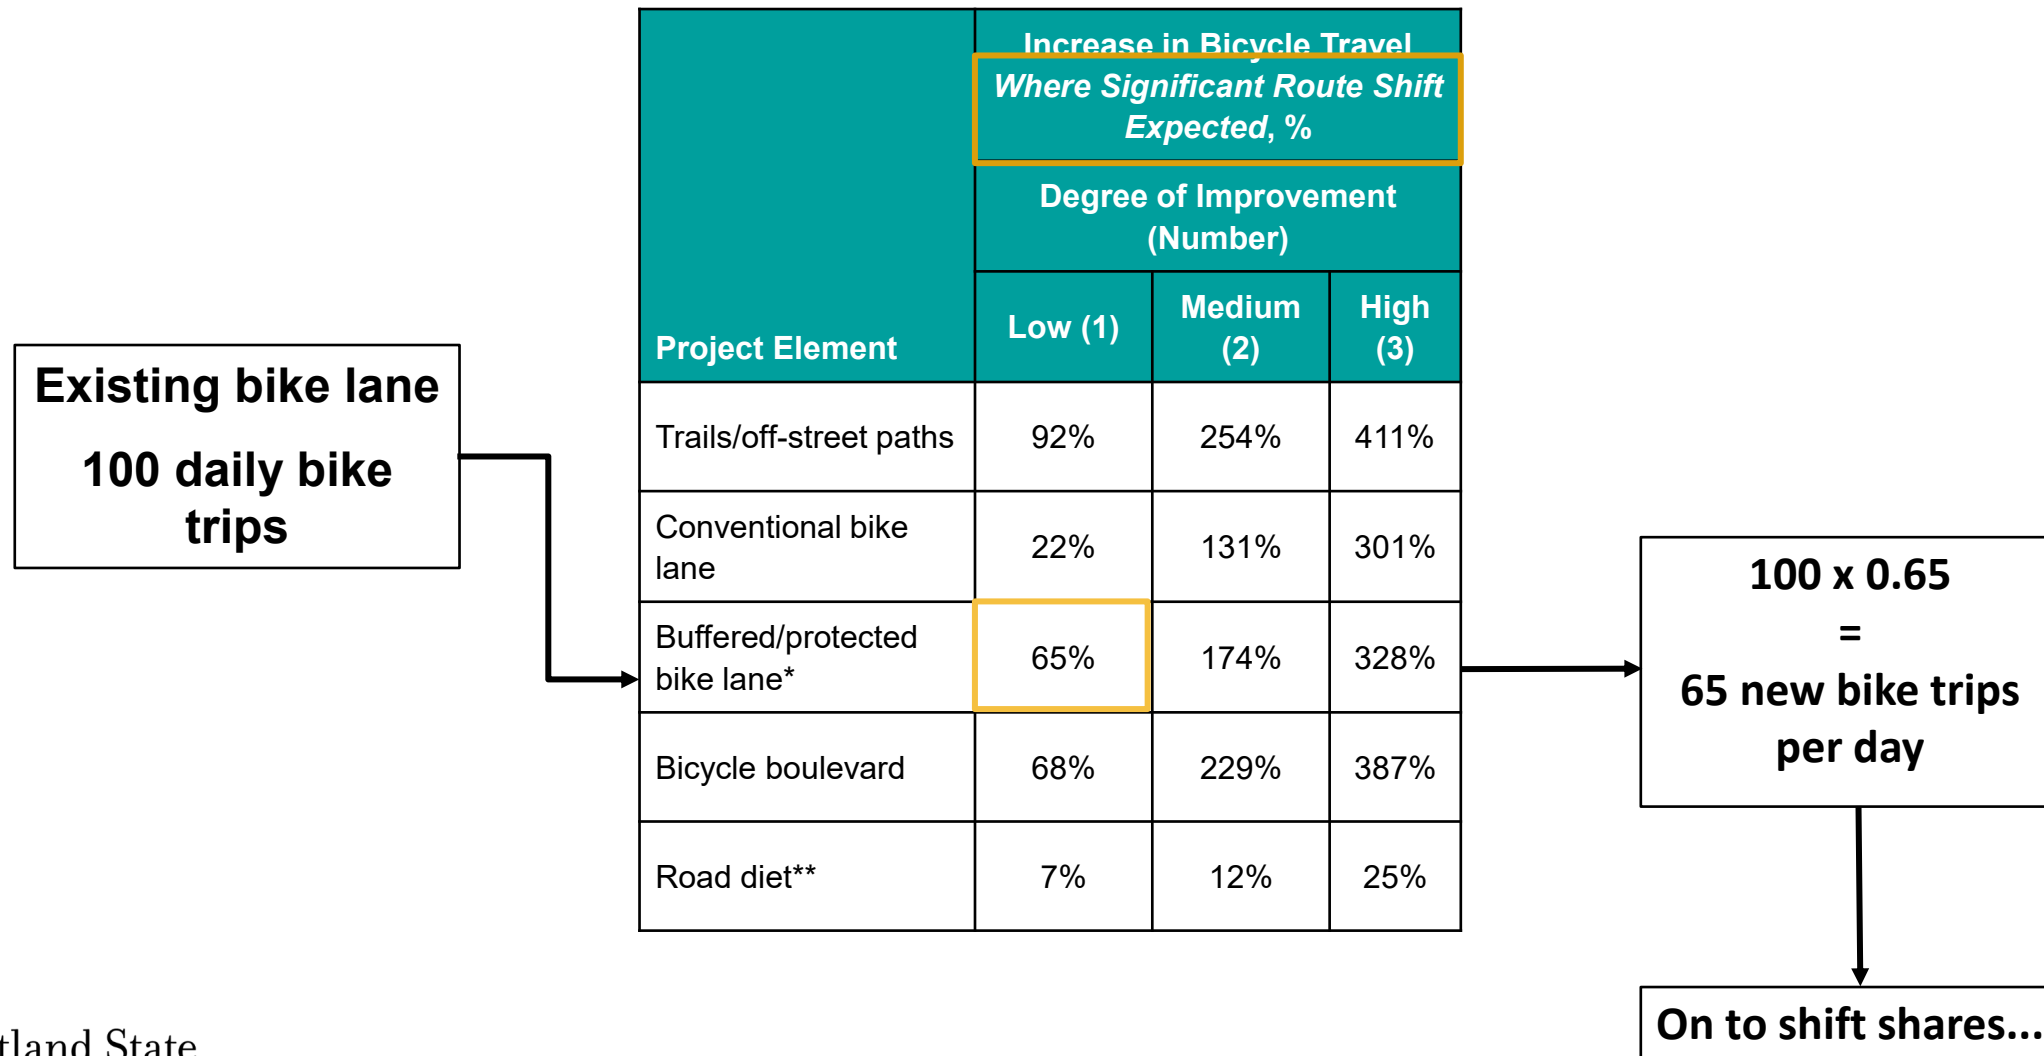

## BICYCLE LEVEL OF TRAFFIC STRESS

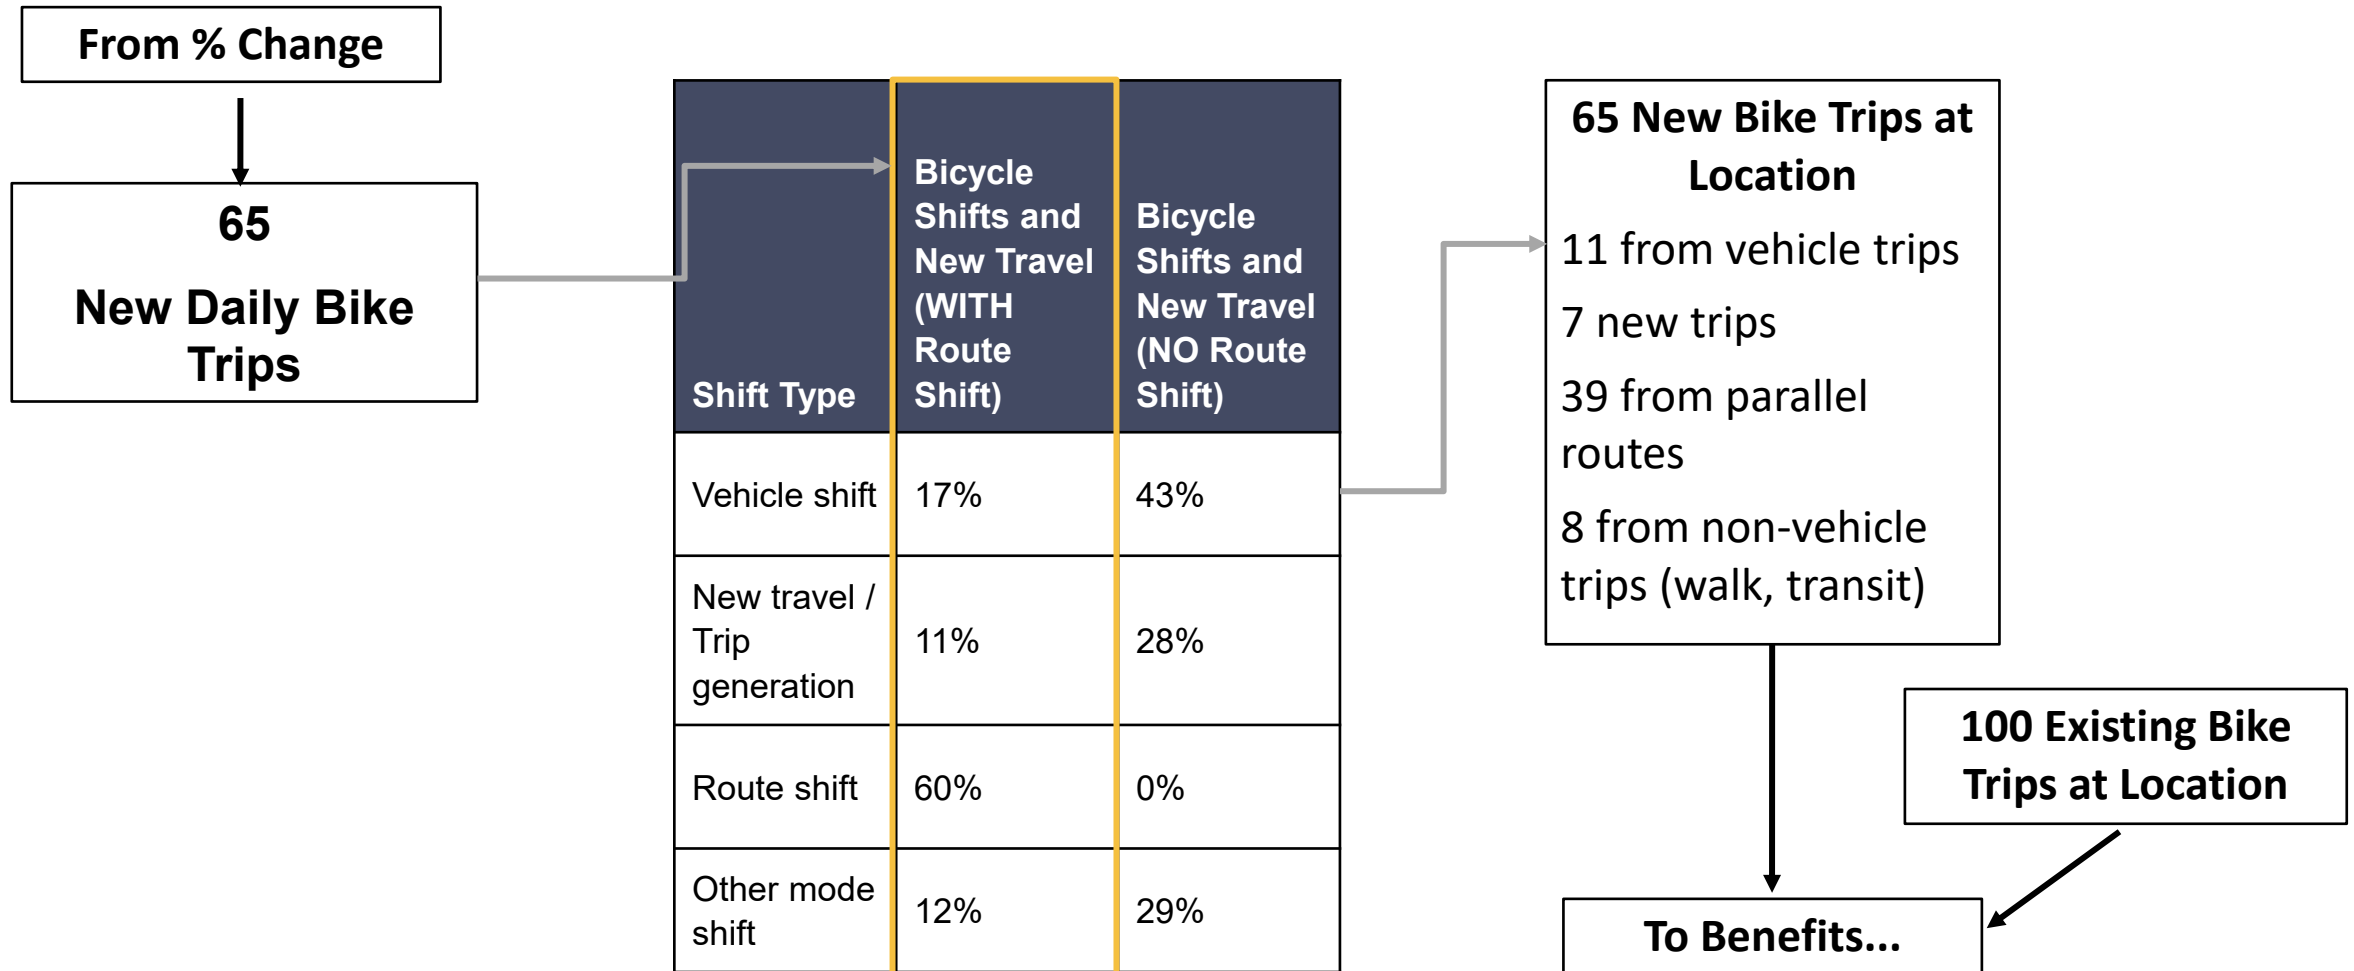

INCREASING LEVEL OF COMFORT, SAFETY, AND INTEREST IN BICYCLING FOR TRANSPORTATION

# Example: Percent Change for Bike Lane Upgrade (LTS 3 -> 2)

# Example: Shift Shares for Bike Lane Upgrade (LTS 3 -> 2)

# Benefits Directly from Behavior Change: The Math (Basic Method)

Health

**18 New Trips from Vehicle or Activity Shift**

Mode	Per trip benefit	% of population in age range
Walking	\$7.63	68% 20-74 years
Bicycling	\$6.80	59% 20-64 years

**18\*\$6.80\*.59**  
**=\$73.02 (Daily) or**  
**\$26,651.72**  
**annually**

Travel Options

**65 New Trips**  
**100 Existing Trips**

Recommended Monetized Value(s)	
Facility Type	Recommend Value per Cycling Mile (2022 \$)
Cycling path with at-grade crossings	\$1.57
Cycling path with no at-grade crossings <sup>2</sup>	\$1.97
Dedicated cycling lane	\$1.86
Cycling boulevard / "sharrow" <sup>4</sup>	\$0.29
Separated cycle track	\$1.86

**(100+.5\*65)\*1\*\$1.86**  
**=\$246.45 (Daily) or**  
**\$89,954.25**  
**annually**

Emissions

**11 from Vehicle Shift**

Pollutant	2025	2030	2035	2040
Carbon Monoxide (CO)	3.648	2.641	1.989	1.664
Particulate Matter <2.5 µm (PM <sub>2.5</sub> )	0.012	0.011	0.010	0.010
Particulate Matter <10 µm (PM <sub>10</sub> )	0.047	0.046	0.045	0.045
Nitrogen Oxide (NOx)	0.191	0.097	0.057	0.045
Volatile Organic Compounds (VOC)	0.156	0.107	0.086	0.078
Carbon Dioxide (CO <sub>2</sub> )	371	336	NA	NA
Carbon Dioxide Equivalent (CO <sub>2</sub> e)	374	339	NA	NA
Total Energy Consumption (MMBTU/day)	5.02	4.55	4.25	4.08

Year	CO <sub>2</sub> (value per metric ton)	NO <sub>x</sub> (value per metric ton)	PM <sub>2.5</sub> (value per metric ton)
2025	\$237	\$20,300	\$975,500

**((11\*2.38(avg. bike trip in miles)\*.191\*365)/1000)\*\$20,300**  
**= \$37.22**

# Communicating Results

## Westside Trail Bicycle & Pedestrian Bridge

### Tualatin Hills Park & Recreation District

Construction of the Westside Trail Bicycle and Pedestrian Bridge will complete a key trail segment in the Metro Regional Trail system and connect the 25-mile-long Westside Trail over U.S. 26, linking communities from King City to the City of Portland.

Described within Metro's 2014 Westside Trail Master Plan as "a crucial link, without which intersecting Westside Trail sections would not be functional," the bridge closes a critical gap in the region's active transportation network, improving access to housing, schools, jobs, local businesses, parks, recreation centers, public transit hubs, and downtown cultural and commercial districts. The bridge will create a safe off-street alternative to nearby high-crash and high-injury corridors for over 100,000 pedestrians, runners, and cyclists using the Westside Trail each year. Key destinations served by this project include Sunset High School, businesses including the Nike and Columbia Sportswear world headquarters, and the Cedar Mill 2040 Town Center.

**State & Federal Agency Coordination**  
The Westside Trail and the bridge are in the right-of-way of power transmission lines and will also cross U.S. 26 right-of-way. Construction will require coordination with

#### Project Partners

- Lead agency: Tualatin Hills Park & Recreation District
- Oregon Department of Transportation
- Washington County
- City of Beaverton

#### Total Estimated Project Cost

- Up to \$35.4 million
- In 2024, THPRD will begin design and engineering of the bridge, further refining the cost estimate and developing construction drawings. Depending on regulatory, engineering, and construction constraints, the total cost to develop the bridge, inclusive of all project phases, could range from \$28.1 to \$35.4 million.

#### Remaining Funding Gap

- \$24.7-32 million

In Summer 2024 Metro staff collaborated with local agency partners to compile a list of "shovel-ready" projects key to building out the regional trail system, with fact sheets that can be used to advocate for and secure state, federal, and private funding for trail design and construction.

Graphics are for illustration purposes only and may not reflect final designs.

the Bonneville Power Administration and Portland General Electric, as well as the Oregon Dept. of Transportation (ODOT) and Washington County. Other permits and coordination will be required from Oregon Dept. of Environmental Quality, Oregon Dept. of State Lands, and the U.S. Army Corps of Engineers.

#### Estimated Annual Project Outcomes and Impact When Project is Complete<sup>1</sup>

- Trail users: 399,000
- Tons of greenhouse gases reduced: 40
- VMT<sup>2</sup> reduction: 175,000
- Enhanced amenities benefits<sup>3</sup>: \$299,000
- Emission benefits: \$11,000
- Health benefits: \$294,000
- Total emissions, amenities, and health benefits: \$604,000

#### Major Opportunities & Constraints

The project will serve areas of higher concentrations of people of color and lower average household incomes than the region overall. It will provide low- and no-cost transportation options within an ODOT-identified transportation-disadvantaged

area, in addition to providing a dedicated pedestrian alternative to existing near crossings identified as high-injury corridors by Washington County's 2016 Transportation Plan and Metro's 2017 High & Intersections Report.

The bridge will serve as a connector between the development of unbuilt segments of Westside Trail north and south of U.S. 26, many of which are being developed concurrently with the bridge. Current work in progress includes development of final construction documents, which are expected within fiscal year 2027-28. This project is essentially "shovel-ready" and if remaining funding were secured, the Westside Trail bridge could move to secure permits and proceed with construction.

# Thank you!

Please feel free to talk to or email me ([melling@pdx.edu](mailto:melling@pdx.edu)) at any time and I will happily answer any questions or show you in depth examples of the tool (Graduating in June if you have a need for an analyst or a policy person)!

Also we are looking for beta testers for the tool! If interested please reach out to Joe! [jbroach@pdx.edu](mailto:jbroach@pdx.edu)

# Questions?
